Exercises I

Deadline: 2024 01 August

Score: 350

Tuesday - 2024 23 July

Question 01 (Basic)

50

Change the type of each of the following variables to the requested type.

#convert to int

```
num1 = 12.45  
num2 = "12.45"  
flag1 = True  
code = "a123"  
num3 = "0123"
```

#convert to float

```
num4 = 10  
num5 = 4.  
num6 = "4.7"  
num7 = "51"  
name = "python"
```

#convert to bool

```
flag3 = False  
flag4 = "False"  
name1 = ""  
name2 = " "  
num8 = 0
```

#convert to str

```
flag = False  
num = 0.000
```

Question 02 (Basic)

Explain the results of the following codes step by step, and if there are errors, explain the reason for the error and fix it.

```
1 x = "300"  
2 y = int(x)  
3 z = y + 200  
4 a = float(z)  
5 b = a + x  
6 c = int(b) + 100
```

```
1 x = "250"  
2 y = int(x)  
3 z = y // 3  
4 a = str(z)  
5 b = a + x  
6 c = int(b) // 2
```

Question 03 (Basic)

Prompt the user for a string. Output True for "yes" or "no" inputs, and False for all other inputs, without using conditional statements.

Question 04 (Basic)

Prompt the user to enter a string. Print True if the string is non-empty and False otherwise, without using any conditional statements (if, elif, else).

Question 05 (Basic)

write a program that prompts the user to enter a temperature in Celsius. Your program should then convert this temperature to Fahrenheit and print the result.

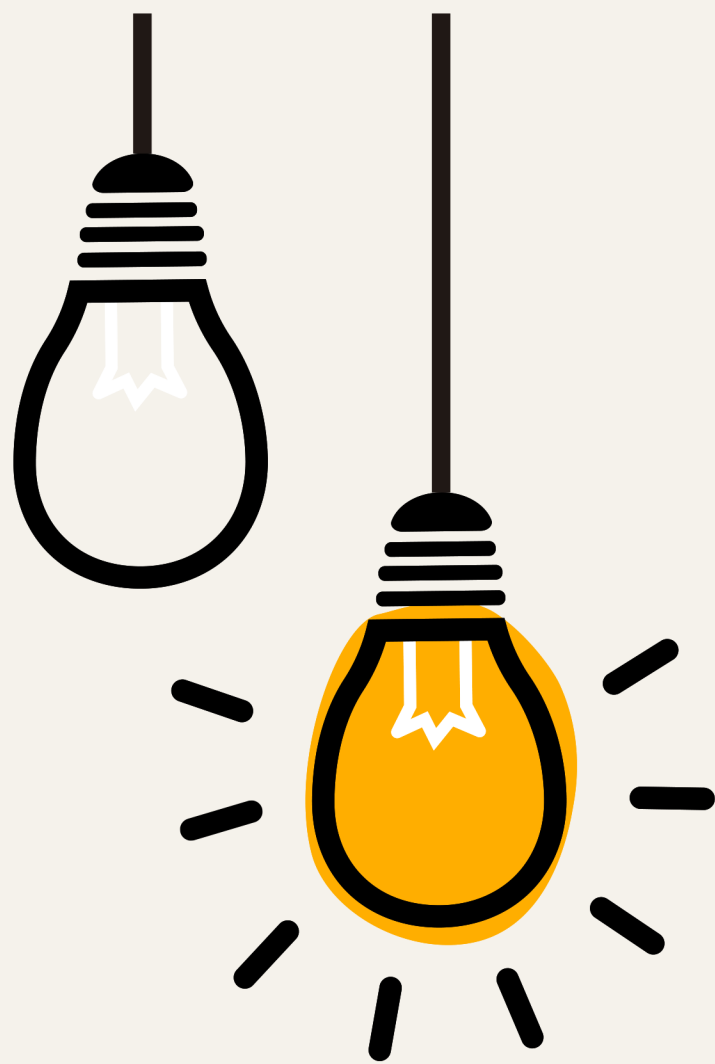

Question 06 (Basic)

Tuesday - 2024 23 July

Explain the results of the following codes, and if there are errors, explain the reason for the error and fix it.

```
1 num1, num2, num3 = 17, 1.8, 28
2 num4, num5 = 45, 12, 19
3 num6, num7, num8 = 200, 300
4 name, score, passed = "Sara", 19, True
5 var1 = var2 = var3 = 500
```

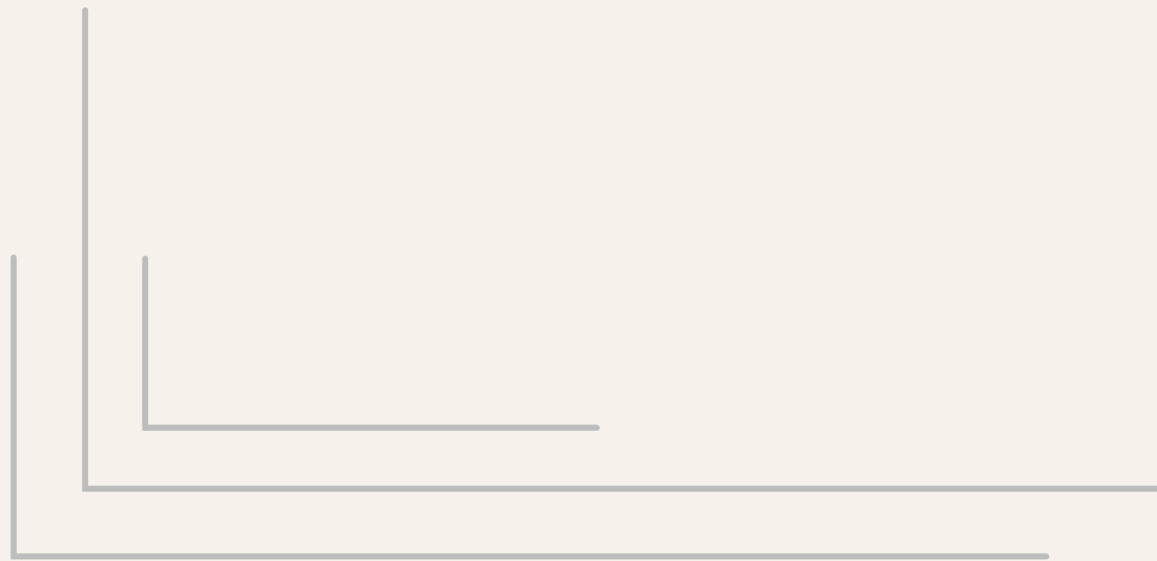

```
8 num1 = 20
9 num2 = 30
0 num1, num2 = num2, num1
1 print(num1, num2)
```

Exercises 2

Deadline: 2024 01 August

Score: 200

Tuesday - 2024 23 July

A decorative pattern of small pink dots arranged in a grid, located in the bottom right corner of the slide.

Question 01 (Condition)

Write a program that prompts the user for a letter. If the letter is 'a', 'e', 'i', 'o', or 'u', print "Vowel". Otherwise, print "Consonant".

Question 02 (Condition)

Write a conditional statement to check if a given variable "number" is within the range 10 to 20 inclusive. Print "in Range" if it is, otherwise print "Out of Range".

Question 03 (Condition)

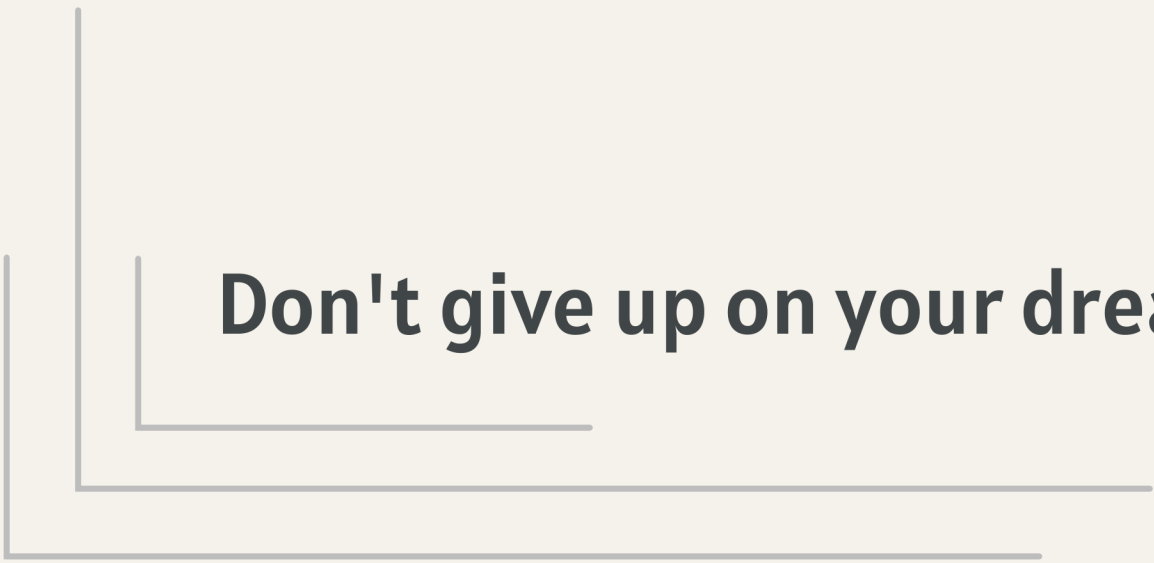

Write a program that prompts the user two numbers. Write a conditional statement to check if the sum of them is greater than 20. If yes, print "Greater", else print "Not Greater".

Question 04 (Basic)

Write a program that prompts the user for three different colors (as strings). If all three colors are the same, print "All colors match". If only two colors match, print "Two colors match". If no colors match, print "No colors match".

A decorative vertical bar on the left side of the slide, consisting of three colored segments: a wide light red segment, a medium blue segment, and a narrow light beige segment. In the top right and bottom right corners, there are rectangular areas filled with a grid of small, light red dots.

GOOD LUCK!

A decorative L-shaped line in the bottom left corner, composed of three horizontal segments of increasing length and one vertical segment connecting them.

Don't give up on your dreams :)
